Summary

Final-year Computer Networks student at UIT-VNU seeking a **DevOps Intern** role. Hands-on experience building cloud-native systems with Docker, Kubernetes, Terraform, Ansible, CI/CD pipelines, and MLOps at scale.

Education

University of Information Technology, VNU-HCM — Ho Chi Minh City, Vietnam
B.Eng. in Computer Networks and Data Communications — *2023 – Expected 2027*
- GPA: 8.75/10.00

Projects

MLOps PaaS System | GitHub | *Django, FastAPI, Redpanda, PostgreSQL, Kubernetes, AWS, Ansible, GitHub Actions, Argo CD, Argo Workflows, MLflow, Kubeflow, BentoML* — 3/2026 – Present
- Built a multi-tenant MLOps PaaS automating training, isolated deployment, drift monitoring, and immutable versioning for XGBoost, Scikit-learn, PyTorch, and TensorFlow, orchestrated by a Django REST control plane and Argo Workflows.
- Dynamically packaged container images and served isolated per-version models via FastAPI + MLflow (ML) and BentoML (DL), persisting metadata in PostgreSQL and versioned artifacts in AWS S3.
- Monitored data drift with Evidently AI by comparing reference datasets against live inference data ingested via Redpanda into PostgreSQL; triggered automated retraining with Kubeflow Training Operator and Karpenter CPU/GPU autoscaling.
- Automated CI/CD and GitOps end-to-end: Terraform provisioned AWS cloud infrastructure, Ansible bootstrapped K3s cluster, GitHub Actions built and pushed tagged images, and Argo CD synced applications.

SageLMS | GitHub | *React, Spring Boot, FastAPI, Kubernetes, GKE, GitHub Actions, FluxCD, Kyverno, Harbor, Cosign, Trivy, SonarCloud* — 4/2026 – 6/2026
- Architected a DevSecOps microservices platform (Spring Boot backend + FastAPI LangChain AI tutor) on GKE, provisioning GCP infrastructure with OpenTofu and automating continuous GitOps delivery via FluxCD.
- Automated shift-left CI on every PR: Gitleaks secret scanning, multi-stack testing (JUnit/pytest/Vitest), Hadolint Docker linting, Checkov IaC validation, Trivy scans, and SonarCloud quality gates.
- Engineered secure CD with Trivy vulnerability gates, keyless Cosign image signing, CycloneDX SBOM attestation, and Kustomize digest PRs; enforced Kyverno policies for Harbor-trusted, non-root pods.

Awards

Encouragement Scholarship for Academic Excellence
- Semester 1, 2023 – 2024
- Semester 1, 2024 – 2025
- Semester 2, 2024 – 2025

Research

CSoNet 2026 | *A Drift-Aware MLOps Framework for Multi-Model Serving: A Network Intrusion Detection Case Study* — Accepted
- First author; proposed a tenant-aware control/data-plane MLOps architecture featuring a Native Registry and asynchronous production logging to trace model-version provenance, reference baselines, and monitoring reports across multi-model endpoints.
- Validated across 120 CICIDS2017 windows: attack prevalence shifts flagged 74.2%–98.1% of features at Macro-F1 $\geq$ 0.999, while 25% held-out attack replacement cut recall to 0.753 with only 1/5 KS-BH alerts, establishing human-reviewed update boundaries.

Technical Skills

Cloud & Infrastructure: AWS, GCP, Terraform, Ansible, Linux
Containers & Orchestration: Docker, Kubernetes, EKS, GKE, Helm, Argo Workflows
CI/CD & GitOps: Git, GitHub, GitHub Actions, Argo CD, Flux CD
Observability: Prometheus, Alloy, Loki, Grafana, Zabbix
MLOps: MLflow, Kubeflow, BentoML, Evidently AI
Frameworks & Databases: ReactJS, Django, FastAPI, PostgreSQL, Redis, Redpanda/Kafka
Languages: Python, TypeScript, Java, Bash, SQL
