Summary

Final-year Computer Networks student at UIT-VNU seeking a **Fullstack Intern** role. Experienced in building web apps with React/TypeScript, developing RESTful APIs with Django, FastAPI, and Spring Boot, and deploying containerized services on AWS/GCP.

Education

University of Information Technology, VNU-HCM — Ho Chi Minh City, Vietnam

B.Eng. in Computer Networks and Data Communications — *2023 – Expected 2027*

- GPA: 8.75/10.00

Projects

MLOps PaaS System | GitHub | *React, Django, FastAPI, PostgreSQL, Redis, Celery, Docker, AWS, Kubernetes, Argo CD* — 3/2026 – Present

- Architected a multi-tenant MLOps platform to manage end-to-end ML/DL model lifecycles, featuring an interactive React 19 dashboard UI and a modular monolith Django orchestration control plane.
- Structured the frontend via Feature-Driven Architecture with permission-aware React Router, TanStack Query caching, Zod-validated multi-step forms, direct S3 presigned uploads, and real-time log polling.
- Combined the Django monolith with scalable FastAPI Serving, Consumer, and Evidently Drift microservices; used PostgreSQL as the single source of truth and S3 for artifacts, secured by RS256 JWTs, with Celery and Redis tasks using transaction commit hooks and signed webhooks.
- Containerized services with multi-stage Docker builds, deployed workloads to Kubernetes on AWS infrastructure, and established automated CI/CD and continuous GitOps promotion workflows via GitHub Actions and Argo CD.

SageLMS | GitHub | *TypeScript, Java, Python, React, Spring Boot, FastAPI, LangChain, Gemini, PostgreSQL, Redis* — 4/2026 – 6/2026

- Engineered an AI-powered Learning Management System built on a polyglot microservices architecture, serving students, instructors, and admins with end-to-end course authoring, progress tracking, and interactive assessments.
- Built an interactive React 18 SPA featuring role-based protected routing, an assessment runner with countdown timers and local draft recovery, multimedia lesson viewers, and a responsive AI Tutor conversational chat interface.
- Developed distributed backend services orchestrated via Spring Cloud Gateway for centralized JWT/RBAC routing, domain-isolated Spring Boot microservices with PostgreSQL and Redis, and an intelligent RAG-driven AI Tutor service using FastAPI, LangChain, and Gemini.

Awards

Encouragement Scholarship for Academic Excellence

- Semester 1, 2023 – 2024
- Semester 1, 2024 – 2025
- Semester 2, 2024 – 2025

Research

CSoNet 2026 | *A Drift-Aware MLOps Framework for Multi-Model Serving: A Network Intrusion Detection Case Study* — Accepted

- First author; proposed a tenant-aware control/data-plane MLOps architecture featuring a Native Registry and asynchronous production logging to trace model-version provenance, reference baselines, and monitoring reports across multi-model endpoints.
- Validated across 120 CICIDS2017 windows: attack prevalence shifts flagged 74.2%–98.1% of features at Macro-F1 $\geq$ 0.999, while 25% held-out attack replacement cut recall to 0.753 with only 1/5 KS-BH alerts, establishing human-reviewed update boundaries.

Technical Skills

Languages: JavaScript/TypeScript, Python, Java, SQL, Bash
Frontend: ReactJS, Tailwind CSS, Radix UI, Ant Design
Backend: RESTful APIs, Django, FastAPI, Spring Boot, Celery
Databases & Storage: PostgreSQL, MongoDB, Redis, Redpanda/Kafka, S3/MinIO
Cloud & DevOps: Linux, AWS, Docker, Terraform, Ansible, Kubernetes, Git/GitHub, Argo CD
